

Steve,

I first want to commend you on the extensive amount of work you have done and the attention to detail. From an engineers perspective this is one of the most informative CMM's I have ever read.

Overall it looks really good, there were only a couple of areas that needed to be revised. In regards to the couple pages I noted "Visual Inspection Only" what I am attempting to say is that normal mechanics do not need such detailed dimensions of the product and are only looking for obvious damage to the pump. Its assumed the dimensions are correct when the pump was originally manufactured.

In regards to the Fits and Clearance section, only a couple of items needed to be added. The remaining marks throughout the document are minor corrections.

I am in the office finally for the next few weeks so please do not hesitate to contact me.

Regards,

Shawn Pollack
